

DTF
JEWELLERY

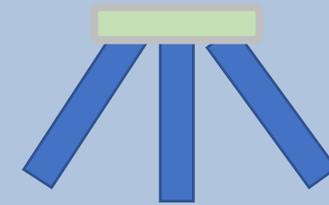

WHAT IS DTF?

DTF is a company that tries to make surviving during lockdown that little bit easier.

Specifically, we try to remove the worry of always thinking 'I can't touch my face, I can't touch my face.' With our necklaces and pendants, we'll try our best to help you through this time.

HOW DOES IT WORK?

Our products use three InfraRed emitters and an Arduino Nano, arranged as follows (Blue = InfraRed emitter, grey + green = Arduino) -

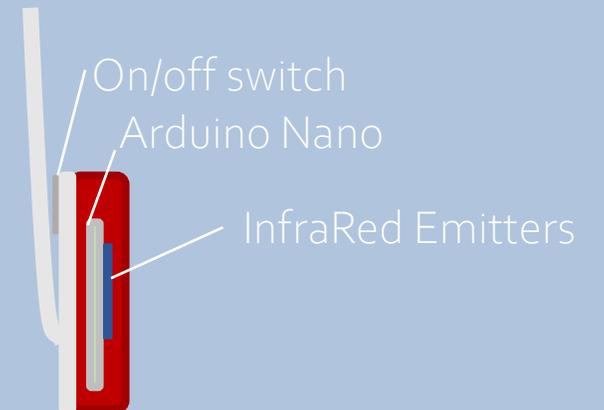

These beams reach about 13.5cm in front of the wearer.

If any of the InfraRed beams are broken, the Arduino will vibrate.

HOW DOES IT WORK?

HOW MUCH?

We sell two variants of our products – BASIC and PREMIUM.

The BASIC model will cost £35. This covers the price of the Arduino Nano, the Infrared Emitters and the manufacturing of the basic necklace or pendant shape.

However, the PREMIUM model will cost £75. This is because with the PREMIUM model you can use any shape and material to create your very own necklace or pendant. Want to show off to your friends with a diamond pendant? Then the PREMIUM option is for you.

WHAT ABOUT AFTER COVID?

Now, you may be forgiven for thinking that when the lockdown is over, there will be no use for our products – but that's where you are wrong. Some other uses for our products include:

Making sure you are not too close to an oven or another dangerous surface.

Alerting you if something is very close. (For the visually impaired or partially blind.)

Keeping your hands away from your face if working with toxins or other chemicals

FINAL WORDS

We hope you consider investing in one of our products. Whether it be as a gift for a loved one, a way to treat yourself, or an essential item, we here at DTF will do our absolute best with every product we sell. By buying our products, you are helping protect the world from COVID-19 – one pendant at a time.

And finally,
from everyone at
DTF JEWELLERY,

STAY SAFE
